Adhesives — T-peel test for flexible-to-flexible bonded assemblies

The European Standard EN ISO 11339:2005 has the status of a British Standard
National foreword

This British Standard is the official English language version of EN ISO 11339:2005. It is identical with ISO 11339:2003. It supersedes BS EN 14173:2002 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PRI/52, Adhesives, which has the responsibility to:

— aid enquirers to understand the text;
— present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep UK interests informed;
— monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the BSI Electronic Catalogue or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN ISO title page, the EN ISO foreword page, the ISO title page, pages ii to iv, pages 1 to 5 and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

Adhesives - T-peel test for flexible-to-flexible bonded assemblies
(ISO 11339:2003)

This European Standard was approved by CEN on 29 April 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.
Foreword

The text of ISO 11339:2003 has been prepared by Technical Committee ISO/TC TC 61 "Plastics" of the International Organization for Standardization (ISO) and has been taken over as EN ISO 11339:2005 by Technical Committee CEN/TC 193 "Adhesives", the secretariat of which is held by AENOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2005, and conflicting national standards shall be withdrawn at the latest by November 2005.

This document supersedes EN 14173:2002.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Endorsement notice

The text of ISO 11339:2003 has been approved by CEN as EN ISO 11339:2005 without any modifications.

Safety:

Persons using this standard shall be familiar with normal laboratory practice. This standard does not purport to address all the safety problems, if any, associated with its use. It is the responsibility of the user to establish safety and health practices and to ensure compliance with any European or national regulatory conditions.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75% of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 11339 was prepared by Technical Committee ISO/TC 61, Plastics, Subcommittee SC 11, Products.

This second edition cancels and replaces the first edition (ISO 11339:1993), which has been technically revised.
Adhesives — T-peel test for flexible-to-flexible bonded assemblies

1 Scope

This International Standard specifies a T-peel test for the determination of the peel strength of an adhesive by measuring the peeling force of a T-shaped bonded assembly of two flexible adherends. This test procedure does not provide design information.

NOTE This method was originally developed for use with metal adherends, but other flexible adherends may also be used.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 291:1997, Plastics — Standard atmospheres for conditioning and testing

ISO 472:1999, Plastics — Vocabulary

ISO 10365:1992, Adhesives — Designation of main failure patterns

EN 13887:— 1), Structural adhesives — Guidelines for surface preparation of metals and plastics prior to adhesive bonding

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1 force per unit width necessary to bring an adhesive joint to the point of failure and/or maintain a specified rate of failure by means of a stress applied in a peeling mode

[ISO 472]

3.2 flexible adherend
adherend having dimensions and physical properties that permit bending through any angle up to 90° without breaking or cracking

1) To be published.
4 Principle

For the T-peel test for a flexible-to-flexible assembly, the force is applied to the unbonded ends of the specimen. The angle between the bond line and the direction of the applied force is not fixed.

Adherends are separated at an approximately steady rate from an open edge of a prepared bond, so that separation occurs progressively along the bond line.

5 Apparatus

5.2 Tensile-testing machine\(^2\), capable of maintaining a predetermined constant crosshead rate (preferred rate 100 mm/min). It shall be provided with a suitable self-aligning grip to hold the specimen. Each set of jaws of the grip shall firmly engage the outer 25 mm of one of the unbonded ends of the flexible adherend. The grip and attachments shall be constructed in such a way that they will move into alignment with the specimen as soon as the force is applied. The machine shall produce a chart that can be read in terms of millimetres of crosshead movement as a function of the applied force.

The machine shall permit the measurement and recording of the applied force with an accuracy of ±2 %. All equipment shall be calibrated regularly. It is recommended that inertia-free equipment be used for this test.

5.2 Device for measuring thickness, with an accuracy of ±0,01 mm, or a means of controlling the thickness to that tolerance.

6 Test specimens

6.1 Test specimens of the dimensions shown in Figure 1 shall be prepared, either individually or cut from bonded laminates. Individual test specimens shall consist of two flexible adherends properly prepared and bonded together.

6.2 Surface treatment shall be such as to obtain optimum strength in the bonded assembly. The preparation of the surface shall be in accordance with EN 13887, and the preparation shall be stated in the test report.

The adhesive shall be applied in accordance with the manufacturer's instructions to obtain an optimum bond with minimum variation; the procedure shall be reported in the test report.

NOTE Direct comparison of different adhesives can be made only when specimen construction, adherend materials and dimensions, and test conditions are identical.

6.3 The thickness of the flexible adherends shall be reported.

NOTE The preferred thicknesses are 0,5 mm ± 0,02 mm for steel (type XES) and 0,5 mm ± 0,02 mm or 0,7 mm ± 0,02 mm for aluminium (type 5754, H111) unless otherwise specified.

6.4 Test specimens shall be cut from the bonded panels (see Figure 1) by a method that is not deleterious to the bond.

---

2) See for instance ISO 5893, Rubber and plastics test equipment — Tensile, flexural and compression types (constant rate of traverse) — Specification.
The width shall be either

a) 25 mm (preferred width)

or

b) any other convenient width, provided that the test equipment is suitably adapted and the width is stated in the test report.

NOTE The method of cutting the specimens is dependent upon the adherend and adhesive compositions and the specimen width tolerance specified in Figure 1. Milling and bandsawing are two methods commonly used for this purpose.

6.5 The two unbonded ends of the flexible adherends shall be bent in opposite directions until each end is perpendicular to the bonded assembly, to form a T-shaped specimen (see Figure 1) for clamping in the grips of the test machine.

6.6 The number of specimens tested shall be not less than five.

6.7 The specimens shall be conditioned and tested in one of the standard laboratory atmospheres specified in ISO 291, which shall be reported in the test report.
7 Procedure

On at least five specimens, using the device described in 5.2, measure with an accuracy of ± 0,01 mm the average thickness of the adhesive layer after formation of the bond. Clamp each unbonded end of the T-shaped specimen in the grips of the test machine, taking care that the end is accurately aligned between the grips, so that the tension applied is distributed evenly across the width. If one adherend is more flexible than the other, attach the less flexible adherend to the moveable grip.

Set the machine in motion at the selected separation rate, and record the force applied versus the distance of grip separation.

NOTE A separation rate of 100 mm/min is generally used for metals and 10 mm/min for other adherends.

Continue the test until at least 150 mm of the bonded length is separated. Note the type of failure in accordance with ISO 10365.

8 Expression of results

Determine from the recorded curve, for at least 100 mm of peeling (disregarding the first 25 mm and the last 25 mm), the average peeling force, in kilonewtons, required to separate the adherends. The average force shall be determined from the graph by drawing the best straight line, or by using other suitable means if a more accurate result is required.

Record the average, maximum and minimum peeling forces for each individual specimen.

9 Precision

The precision of this test method is not known because interlaboratory data are not available. When interlaboratory data are obtained, a precision statement will be added at the following revision.

10 Test report

The test report shall include the following information:

a) a reference to this International Standard;

b) all information necessary for complete identification of the adhesive tested, including type, source, manufacturer's code number, batch or lot number, form, etc.;

c) all information necessary for complete identification of the adherends, including the nature and the thickness of the material, width and surface preparation;

d) a description of the bonding process, including the method of application of the adhesive, drying or precuring conditions (where applicable), curing time, temperature and pressure;

e) the average thickness of the adhesive layer after formation of the bond;

f) a complete description of the specimen, whether individual or cut from a panel, including the dimensions and construction of the specimen, conditions used for cutting individual specimens, number of test panels represented and number of individual specimens (when edge specimens are tested they shall be designated “edge specimens”);

g) the conditioning procedure used prior to testing and the test atmosphere;

h) the crosshead separation rate;
i) the method of determining the average peeling force;

j) the average, maximum and minimum peeling force values, in kilonewtons, for each individual specimen (edge samples shall be reported separately);

k) the calculated average, maximum and minimum peel strength values, in kilonewtons per metre of specimen width, for each specimen (edge samples shall be reported separately);

l) the pattern of failure in accordance with ISO 10365.
BS EN ISO 11339:2005

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover.

Tel: +44 (0)20 8996 9000. Fax: +44 (0)20 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: +44 (0)20 8996 9001.

Fax: +44 (0)20 8996 7001. Email: orders@bsi-global.com. Standards are also available from the BSI website at http://www.bsi-global.com.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre.

Tel: +44 (0)20 8996 7111. Fax: +44 (0)20 8996 7048. Email: info@bsi-global.com.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration.

Tel: +44 (0)20 8996 7002. Fax: +44 (0)20 8996 7001. Email: membership@bsi-global.com.

Information regarding online access to British Standards via British Standards Online can be found at http://www.bsi-global.com/bsonline.

Further information about BSI is available on the BSI website at http://www.bsi-global.com.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.
